INSTRUCTIONS—INFORMATION

To those who are unacquainted with the different classes and varieties of Dahlias I would suggest that such leave the selection to me. Send me the amount of money you wish to invest and in return I will send you those that will surely delight. Also my liberal filling of the order will more than be satisfactory.

ORDER EARLY—As orders are filled in rotation—with field-grown roots only—ordering early will insure the reservation of varieties that later may be sold out.

SUBSTITUTION—Orders are filled with varieties called for, and unless substitution is asked, I never substitute.

TIME OF SHIPMENT—Unless otherwise ordered, tubers will be shipped between April 15th and May 15th by express or insured mail at my expense, on all orders of over \$2.00; under \$2.00 add 15c for postage. Dahlias ordered shipped before April 15th will be sent only at purchaser's risk of drying out, freezing or rotting.

TERMS—Cash with order unless parties are known to me. No goods sent C. O. D. unless 50 per cent of purchase price accompanies order.

GUARANTEE—I guarantee safe delivery. I guarantee all bulbs to grow and to be true to name, and will cheerfully replace any that fail in either respect when not planted too early or planted in wet or soggy ground causing tuber to rot. Not responsible for more than the purchase price of any tuber.

REMITTANCES should be made by bank draft, postoffice money order or registered letter. Postage stamps accepted up to \$2.00. Coin should not be sent by letter unless registered.

ERRORS—While my system for handling orders is as near perfect as possible, yet in the rush of business errors are possible to occur, and I wish to be promptly notified of such and will at once make same satisfactory.

NAME AND ADDRESS—Remember to write your NAME, POSTOFFICE, COUNTRY and STATE, also give STREET NUMBER or P. O. BOX as plainly as possible.

REFERENCE—Any bank in Grand Rapids, Mich.

CULTURAL DIRECTIONS

Dahlias are easily grown, requiring no special soil, treatment or skill to bring them to perfection.

They are really an Autumn flower and should not be planted too early.

They are remarkably free from disease and have few special enemies.

Plant in sunny situation, although they will do nicely in partial shade.

Prepare the soil by deep spading; if soil is sandy a shovel full of well rotted manure may be incorporated with it; if otherwise use little, if any, fertilizer before plants begin to bud. Add sand or coal ashes to heavy soil.

Drive a stake in each hole to support the plant. Lay tuber down flat with eye upward and next to stake, about five inches deep, and cover two inches with pulverized soil, gradually filling to level as plant progresses.

As soon as plants are large enough, pinch out the top just above the second or third set of leaves; this causes the plant to branch. If tall plants are wanted cut off all but one stalk and keep tied up to stake.

Cultivate well until buds appear, then stop all cultivation except light raking after rain or watering, just enough to break the crust of ground; only be sure and do this.

When buds appear spread manure or some fertilizer around plant and rake lightly into the soil.

Sometimes a perfectly good tuber with a good eye will refuse to sprout. In such cases, dig up the tuber and soak for 24 hours in fresh water, this usually will cause it to sprout in a reasonable time after replanting.

Unless weather is very dry and hot, do not begin watering until buds appear, then soak the ground thoroughly (not sprinkle) about once a week or ten days. Cut off all faded flowers with as much of the stalk as you can.

For extra large blooms disbud by pinching off all the buds in a cluster except the strongest one.

If bothered by cut worms or slugs, cut a piece of tarred paper 3 inches wide by 10 or 12 inches long, form collar and place around plant, 1 inch below and 2 inches above the ground.

For cut flowers pick in the evening or early morning if possible; burn the ends of stems in any flame, or dip in boiling water for 10 seconds; after either treatment place in cold water and put in cool place free from draft until wanted.

When frozen down in Autumn, cut stalks off at the ground and dig carefully so as not to break neck of tuber, for the eyes for next season's growth are only found where the tuber joins the stalk. Store same as potatoes where they will not freeze, shrivel or rot. Turn the clump upside down to drain out any moisture that may start decay and when dried about 2 weeks I have the best success packing them upside down in wooden boxes with sheet of paper over top.

To restore wilted blooms, dissolve a tablet of Aspirin in warm water, and place flowers therein. This will freshen some varieties but not all of them.

I am always pleased to answer any questions regarding Dahlia culture.

GLADIOLUS AND HOW TO GROW THEM

PLANTING AND CARE OF GLADIOLUS

The gladiolus is easily grown. It will do well in any soil but a rich sandy loam is best. They should be planted where they will have plenty of sunshine. Plant any time from the middle of April to the last week in May, placing the bulbs about four to six inches deep and at least four inches apart. The top soil should be kept loose and free from weeds. A thorough soaking once a week during a severe drought is necessary for best results, but constant cultivation will do much to conserve moisture.

It is best not to plant gladiolus in the same place many years in succession. New ground each year is best. Should your soil need enriching you will find a good root crop fertilizer, such as bone meal or a good pulverized dry manure best for the purpose.

You will enjoy your gladiolus, and appreciate your bloom more, if each variety is staked and labeled with its proper name.

Dig bulbs in the late fall before they are too ripe. With a sharp knife or shears cut the tops close to the bulb. Dry them in the air and sunshine for a week or two, being sure to protect them from frost at night. Remove the dirt and the old decayed bulb before storing (to leave this until spring is detrimental to the bulb.) Store in a cool dry cellar.

CUTTING FLOWERS

For best results, cut the spike when the first flower opens, leaving at least four or five leaves on the stalk to mature the bulb. Each morning pick off all the wilted bloom, cut off a little of the stem, rinse and give fresh water. Placing them in a cool cellar over night will greatly refresh and improve them.

Many varieties I do not carry a large stock of, and orders will be filled in rotation.
